With your main.py open (in your Day04 folder) I want you to click on this little icon:

It is located on the top right of your VS Code window.

This will launch your AREPL extension. It is very cool because it shows you in real time what your Python program's output is. This means you can see your errors in real time as well as visually test your code as you! Amazing!

With AREPL running on your right I want you to fix this challenge from yesterday using f-strings.

```
**********************************
Python can help us solve many problems. For example:
1. If you get $10 a week in one year, for two years, you will have:
1040
2. If we split a $125 bill between you, me and Sarah:
41.666666666666664
3. If I write 8 lines of code a week for 8 weeks:
64
4. 5*5*5+10 is :
135
Amazing! Python is so clever!
**********************************
```

Clean up the formatting, add $ signs where needed, expand the stars a little to take up more of the screen.

Good luck Python Programmer, look at you go!!

Tomorrow's is going to be such an amazing day! Tomorrow we are learning about Data Types! Don't worry, it's just the basic types of data Python can work with. You got this! See you soon.
